

QUICK SOFA SCORE (QSOFA)

Bedside Screening Tool for Sepsis in Adult Patients Outside the ICU

1. PATIENT IDENTIFICATION

Patient Name: _____

Age / DOB: ____/____/____

MRN / ID: _____

Unit / Ward / Bed: _____

Surgery / Diagnosis: _____

Date / Time: ____/____/____ : ____

THREE BEDSIDE CLINICAL CRITERIA

Clinical Parameter	Options & Scoring Criteria	Score
1. Respiratory Rate (Tachypnea) Auscultate or observe breaths per minute	☐ Normal: Respiratory rate < 22 breaths/min (0) ☐ Abnormal: Respiratory rate ≥ 22 breaths/min (1)	[]
2. Altered Mentation (CNS) Mental status assessment based on Glasgow Coma Scale	☐ Normal: Glasgow Coma Scale = 15 (Fully awake, oriented in time/place) (0) ☐ Abnormal: Glasgow Coma Scale < 15 (Any acute confusion, lethargy, drowsiness) (1)	[]
3. Systolic Blood Pressure (Hypotension) Measured by standard cuff or invasive line	☐ Normal: Systolic BP > 100 mmHg (0) ☐ Abnormal: Systolic BP ≤ 100 mmHg (1)	[]

Surviving Sepsis Campaign Hour-1 Resuscitation Bundle:

1. Measure serum lactate immediately (remeasure within 2-4 hours if initial lactate > 2 mmol/L).
2. Obtain blood cultures prior to starting antibiotics (do not delay antimicrobial therapy).
3. Administer broad-spectrum IV antimicrobials within 1 hour of recognition.
4. Rapidly infuse 30 mL/kg crystalloid fluid for hypotension (MAP < 65 mmHg) or lactate ≥ 4 mmol/L.
5. Apply vasopressors (norepinephrine 1st-line) during or after fluid resuscitation to maintain MAP ≥ 65 mmHg.

TOTAL SCORE: [] POINTS (Maximum: 3 points (High risk if **Assessor (RN / License #):** _____ ≥ 2))**CLINICAL INTERPRETATION & RECOMMENDED NURSING ACTIONS****Low Sepsis Risk (0 - 1 point)**

In-hospital mortality < 1%. Continue targeted treatment of underlying infection, monitor.

High Sepsis Risk / Critical (≥ 2 points)

3x to 14x higher in-hospital mortality. Immediate sepsis bundle: blood cultures, broad-spectrum IV antibiotics, IV crystalloid resuscitation (30 mL/kg), serum lactate, ICU consult.
