Data

Collection

Window:

Record physiological data within ± 1 hour of ICU admission. Points from all 3 boxes are summed to calculate predicted hospital mortality via customized logistic equations.

TOTAL SCORE: [] POINTS (Maximum: 100+ points) Assessor (RN / License #): _____

CLINICAL INTERPRETATION & RECOMMENDED NURSING ACTIONS

Low Predicted Mortality (< 45 points)

Hospital mortality risk < 15%. Routine intensive care monitoring.

Moderate Mortality Risk (45 - 60 points)

Hospital mortality 25 - 50%. Advanced organ support and hemodynamic titration.

High Mortality Risk (> 60 points)

Hospital mortality > 60%. Severe multiorgan failure, critical care escalation.
